

July 22, 2010

STEVEN J. RUBENZER, PH.D., ABPP

Diplomate in Forensic Psychology, American Board of Professional Psychology

11914 Astoria Blvd., Suite 490, Houston, Texas 77089; Ph: (281) 481-5715

[www.SteveRubenzerPhD.com](http://www.SteveRubenzerPhD.com); rubenzer.steve@att.net

## EDUCATION

- 1990      Doctor of Philosophy, Clinical Psychology, University of Houston, Houston, Texas
- Dissertation: Validity and Utility of Traditional and Computer-Generated Psychological Reports in an Adolescent Inpatient Setting
- 1984      Master of Arts, Clinical Psychology, University of Houston, Houston, Texas
- 1980      Bachelor of Science, Psychology, University of Wisconsin-Oshkosh, Oshkosh, Wisconsin

## CERTIFICATION AND LICENSURE

- 2004      Diplomate, Forensic Psychology, American Board of Professional Psychology
- 1992      Psychologist, State of Texas, license #2-4393

## SPECIALIZED TRAINING

- 2006      Vision Science III (eye movements course offered to Ph.D. and OD graduate students), University of Houston College of Optometry, August 23 - December 8.
- 2003      NHTSA Standardized Field Sobriety Testing Instructors Course, June 10 - 13.
- 2002      NHTSA Standardized Field Sobriety Testing Course, July 12 - 14.
- 1987 -      American Psychological Association approved internship in Clinical Psychology, Fairfield  
1988      Hills Hospital, Newtown, Connecticut, August 7 - August 4.

## ACADEMIC APPOINTMENTS

- May '09-      Section Editor: Forensic Instruments, Editorial Board Member, *Open Access Journal of*  
Present      *Forensic Psychology*; peer-reviewed on-line scientific journal
- Oct. '07 -      Editorial Board Member, *Psychological Injury and Law*; peer-reviewed  
Present      scientific journal published by Springer
- Apr. '06 -      Consulting Editor, *Assessment*; peer-reviewed, scientific journal devoted to  
Present      psychological testing published by Sage

Sep. '99 - Adjunct Faculty, Sam Houston State University, Dept. of Psychology  
Feb. '04

RECENT PROFESSIONAL EXPERIENCE

Nov. '89 - *Private Practice Psychologist*  
Present Houston, Texas

Provided psychological and forensic evaluations of persons to assist in diagnosis, treatment planning, determination of trial competency, risk assessment, mental state at the time of offense; eyewitness factors, and standardized field sobriety test consultation and expert testimony. Provided consultation, evaluation, and training for substance abuse clinic and other psychology and psychiatry practices.

Oct. 09- Owner, Forensic Sobriety Assessment, LLC  
Present Houston, Texas

Provided training, certification, consultation, and testimony pertaining to Driving Under the Influence (DUI) cases to attorneys and investigators.

Nov. '90 - *Clinical Psychologist IV* (1995 – 2004)  
Feb. '04 Mental Health and Mental Retardation Authority (MHMRA) of Harris County, Forensic Psychiatry Services, Houston, Texas

Conducted court-ordered evaluations of competency to stand trial, sanity/insanity at the time of the offense for Harris County (Texas) county criminal and state district courts, submitted reports, testified in court hearings and trials.

*Clinical Psychologist II, III* (1990 - 1995)  
MHMRA, Adult Mental Health Division, Houston, Texas

Conducted psychological evaluations for adult mental health outpatients at MHMRA clinics throughout Houston, wrote consultative reports, conducted staff training.

Oct. '89 - *Psychological Tester*, Robert Willard, Ph.D., Pasadena, Texas  
Mar. '90

Conducted psychological (psychopathology, intellectual, personality) testing and wrote consultative reports for adult and adolescent psychiatric inpatients.

Oct. '88 - *Psychotherapist*, Weinberger & Associates, P.C., Houston, Texas  
Oct. '89

Provided individual, group, and family therapy for adolescent psychiatric inpatients and their families.

## AREAS OF PRACTICE AND EXPERTISE

*Assessment of personality, psychopathology, and intelligence* – Standardized tests and procedures are useful to thoroughly and reliably assess human characteristics, including symptoms of mental illness, personality differences, and cognitive abilities. Such techniques are supplemented by review of relevant records and input from collateral sources.

*Assessment of psychological injury* – Determining the extent and cause of psychiatric disability or injury requires a thorough investigation of a claimant's symptoms, history, social environment, and testing performance. Specialized assessment measures may be required, as is input from family and other persons who observe the claimant in daily functioning.

*Assessment of malingering of mental illness and cognitive limitations* – Criminal defendants may feign psychiatric symptoms in order to avoid accountability, while civil litigants might do so in order to create the appearance of damages. Using interview, collateral information, and psychological testing, it is often possible to demonstrate that a person is exaggerating reports of symptoms or did not perform to the best of his/her ability on cognitive tests.

*Evaluation of behavioral DUI/DWI evidence* – *Driving While Intoxicated* offenses are prosecuted using behavioral cues of intoxication, sobriety tests, and breath or blood samples. Having completed the NHTSA SFST Instructor course and published in this area, I can review the arrest video to determine if the tests were administered correctly, and I can testify regarding the limitations in the development, validation, and interpretation of the tests and behavioral cues of intoxication.

*Assessment of competency to stand trial* – A defendant must understand the proceedings and be able to assist in his/her defense. In order to validly waive constitutional rights, such as waiving the right to trial or to testify, the defendant must be able to do so knowingly and intelligently. The examiner must have knowledge not only of psychology or psychiatry, but also of the particular case, the court system and case law in the jurisdiction. Care must be taken not to undermine the defendant's rights.

*Assessment of mental state at the time of the offense (criminal responsibility/insanity defense)* – The insanity defense requires the presence of a severe mental illness at the time of the offense. Depending on the jurisdiction, it must also prevent the person from knowing or appreciating the wrongfulness of the act, or prevent the person from exercising self-control. As with competency to stand trial, the examiner must be knowledgeable about case law pertaining to issues such as amnesia and substance use.

*Assessment of risk and dangerousness* – Psychologists have developed tools over the past 20 years to assess the risk of criminal recidivism, violence, or future sexual abuse. Many are actuarial, in that they rely on demographic characteristics of the subject, their criminal history, and characteristics of the victim, added up or combined in a specified manner. Other risk factors pertain to personal qualities of the person being assessed, such as impulsivity. Each assessment must be tailored to the demographics of the person being assessed and whether prediction of sexual, supervision failure, or general risk is desired.

*Eyewitness expert testimony* – The eyewitness's memory of the face seen at a crime is an extremely fragile piece of evidence that can be contaminated by careless questioning and procedures. Likewise, the eyewitness's confidence can increase dramatically from the time of the original identification through

feedback (“You did good”) or conveying that the eyewitness is vital to the case. A thorough review of the police procedures and lineup materials is required in such cases and compared with the standards laid out by the National Institute of Justice.
